# Samples

Inventory Control

To reduced the hassle and inaccurancies of orders taken by fax, CoachesLocker built their business rules into an MS SQL 2000 database and combines ColdFusion, Javascript, WDDX, XML, and Flash to empower their customers to build a custom uniform as it will appear when delivered. The purchasing agent knows exactly what is being purchased. Pricing and appearance are adjusted on the screen without reloading the page!

A secure backend allows employees through roles based security to process orders, change inventory including what options are available in the flash movie, manage their user database, schedule promotions, adjust pricing for each component of the jersey, manage content like FAQs, create association discounts and much more.

Customization Wizard

Note: All colors, options, etc. are per sku and managed via the backend
